

**Web Application Name:** TownCost

**Date:** 04<sup>th</sup> Feb 2026

**Web Link:** <https://towncost.in/>

**Summary:**

*TownCost* is a community-driven cost-of-living tracking web application that helps users track their personal expenses, understand average cost of living by country, state and city based on real user-submitted data. The platform aggregates anonymized expense data and provides insights only when enough users contribute, ensuring privacy and reliability.

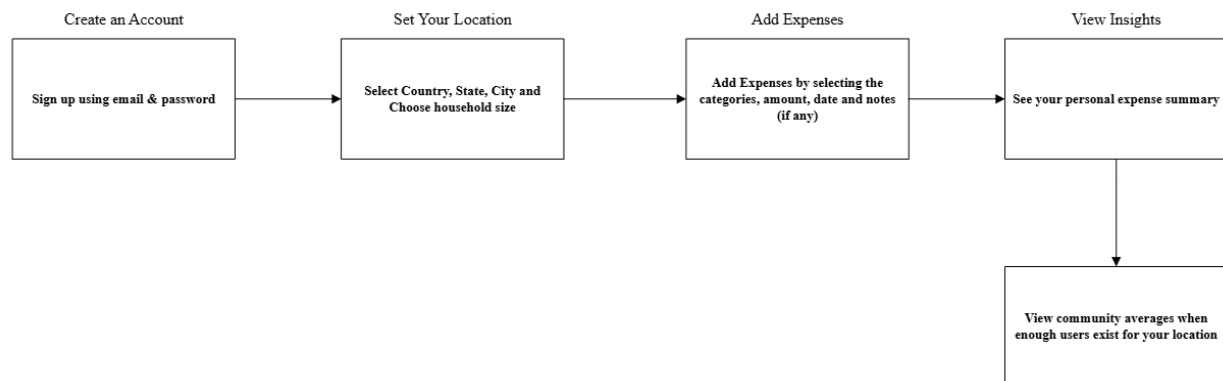

**Tech Stack:**

- Frontend: React + Vite + TypeScript
- UI: Shadcn UI + Tailwind CSS
- Backend & Auth: Supabase
- Database: PostgreSQL (Supabase)
- Hosting: Vercel
- Domain: towncost.in

**Requirements:**

- Internet connection
- Modern browser (Chrome, Firefox, Edge, Safari)
- Email address for authentication

**How-to Guide:**

**Frequently Asked Questions (FAQs):**

- Is my data private?

Yes. Your expenses are private. Only aggregated anonymous data is used.

- Why can't I see community insights yet?

Insights appear only after at least 2 users submit data for the same location.

- Can I edit or delete expenses?

Yes, users can fully manage their own expenses.

**Feedback and Issues:**
